

AFP - Assignment 01 - Vector Calculator Server

Maximo Garcia Martinez

1. Well-known issues

1. When client disconnects, the server crash. I couldn't manage to find a solution for this problem.
2. When the server returns the word "error", it is converted to ASCII code list. One of the ways of solving this issues will be changing `io:format('Res ~w~n', [Result]).` to `io:format('Res ~p~n', [Result]).` but in the PDF it says specifically that we must use `~w`.
